Primus Partners with Bird Technologies

October, 2011

By Primus

It is with great pleasure that Primus announces the inclusion of new radio frequency measurement and management equipment systems from Bird Technologies. Bird Technologies is an industry leading manufacturer of communication products, calibration and training to the Cellular Communications, Broadcast, Public Safety, Government, Military, Semiconductor and Medical markets. Primus is excited to now offer customers Bird's services and products which have grown to stay current with today's most complex communication systems.

Products in Bird's growing line include signal boosters, power monitors, power sensors and meters, loads and attenuators filters, duplexers and triplexers, analyzers, antennas, combining systems, components, tower top amplifiers and accessories.

Among the many new and exciting products offered, the Bird Antenna Tester stands out the most. The Antenna Tester provides a fast, cost-effective, graphical way of determining the quality of mobile and base station antennas.

"Our customers are our number one priority and we are excited to offer Bird products to them," says Doug Salvatori, Inside Sales Manager of Primus. "It has been a long time coming!"

Bird Technologies was established in 1995 following the merger of Bird Electronics Corporation and TX RX Systems, both leaders in the RF communications market. The origins of Bird Electronics trace back to 1942 when J. Raymond Bird joined forces with a college friend and began the Bird Engineering Company in Cleveland, Ohio.

Primus hopes you will share in our excitement with the addition of this exciting new product line. Be sure to look for upcoming Primus promotions that will feature products from this new partnership.

For more information or to request a catalog featuring Bird products available through Primus, call (800) 435-1636.
